

How to Pay Me in USDC (Crypto Made Easy)

Recipient: Richard Davis (lucidity.design)

Payment Method: USDC (Stablecoin - \$1 = 1 USDC always) on Solana Network

Step-by-Step to Pay:

1. Open your crypto wallet (Coinbase, Phantom, Binance US, etc.).
2. Make sure you have USDC in your wallet. If not, you can buy or swap for it.
3. Choose 'Send' and select USDC as the token.
4. Set the network to Solana (NOT Ethereum, NOT Polygon).
5. Paste this wallet address: 7ZbaWYtxpJPzjbEFGktCoe5uWATS2jBbtHLz17cM9rY
6. Confirm the transaction. Fees should be minimal on Solana.
7. Send me a separate message (email or WhatsApp) with the transaction ID and invoice number or reference. This helps me match the payment correctly.

NOTE: USDC on Solana is fast, stable, and low-fee. Please ensure you choose the correct network. If you are unsure, send a small test payment first.

OPTIONAL: You may choose to include a small service fee to offset network transaction fees. Please confirm the total with me before sending.

USDC Payment Guide

Step 1: Open your wallet

Launch your preferred wallet app (e.g., Phantom, Coinbase, Binance US). Ensure you are logged in.

Step 2: Confirm you have USDC

If you do not have USDC yet, buy or swap for it inside your wallet. Look for USDC (NOT USDT).

Step 3: Select 'Send' and choose USDC

Tap 'Send' and select USDC as the token.

Step 4: Ensure You're Using / Choose Solana as the network

IMPORTANT: Set the network to Solana. Sending on the wrong network (like Ethereum) will result in lost funds.

Not all crypto wallets or exchanges support USDC on Solana. Here's what to do:

- If you're using **Phantom**, Solana is the default network — no need to manually select it.
- If you're using **Coinbase**, **Binance**, or others, check the network options during the 'Send' step.
 - You may see choices like Ethereum (ERC20), Polygon, Arbitrum, or Solana.
 - If **Solana** is not listed, your wallet may not support it.
 - Try using a **Solana-native** wallet like **Phantom** or **Solflare**.

Tip: You can always send from Coinbase to Phantom if needed. Transfer your USDC to Phantom, then send from Phantom to my wallet address.

Step 5: Enter the wallet address

Paste this exact address:

7ZbaWYtxpJPzjbEFGktCoe5uWATS2jBbtHLz17cM9rY

Step 6: Confirm and Send

Double check the amount, network, and address. Then hit Send.

Step 7: Message Richard with the reference

Send a quick email or WhatsApp with the transaction ID and what it is for (e.g., Invoice #1234).

Bonus Tip

If this is your first time, try sending a small test amount first to ensure everything is set up correctly.
